

```
# Numeric vector
```

```
n <- as.numeric(strsplit(readline("Enter 3 numbers separated by space: "), " ")[[1]])
```

```
# Character vector
```

```
c <- strsplit(readline("Enter 3 names separated by space: "), " ")[[1]]
```

```
# Logical vector
```

```
l <- as.logical(strsplit(  
  readline("Enter 3 logical values (TRUE/FALSE): "), " ")[[1]]  
)
```

```
cat("\nNumeric vector:", n)
```

```
cat("\nType:", typeof(n))
```

```
cat("\n\nCharacter vector:", c)
```

```
cat("\nType:", typeof(c))
```

```
cat("\n\nLogical vector:", l)
```

```
cat("\nType:", typeof(l))
```

The screenshot shows the RStudio interface with the following components:

- Script Editor:** Contains the R code from the previous blocks, numbered 1 to 19.
- Console:** Shows the output of the code execution, including prompts for user input and the resulting vectors and their types.
- Environment:** Displays the objects created in the global environment.

Console Output:

```
> source("~/active-rstudio-document")  
Enter 3 numbers separated by space: 10 20 30  
Enter 3 names separated by space: ravi raju ramu  
Enter 3 logical values (TRUE/FALSE): TRUE FALSE FALSE  
  
Numeric vector: 10 20 30  
Type: double  
  
Character vector: ravi raju ramu  
Type: character  
  
Logical vector: TRUE FALSE FALSE  
Type: logical  
> |
```

Environment:

Object	Value
c	chr [1:3] "ravi" "raju" "ramu"
l	logi [1:3] TRUE FALSE FALSE
n	num [1:3] 10 20 30
